SSC Marks (ssc_p)

- The skew value (-0.13) is slightly negative, showing the distribution is almost symmetric with a small left skew.
- The kurtosis (-0.61) is less than 0, indicating it is playkurtic, flatter than normal with lighter tails and fewer extreme values.

Higher Secondary Marks (hsc_p)

- The skew value (0.16) is slightly positive, showing the distribution is slightly right-skewed.
- The kurtosis (0.09) is close to 0, indicating it is mesokurtic, similar to a normal distribution with moderate tails.

Degree Marks (degree_p)

- The skew value (0.20) shows a slight positive skew, meaning a few higher values are present.
- The kurtosis (-0.10) is less than 0, indicating it is platykurtic, slightly flatter than normal with lighter tails.

Entrance Exam Marks (etest_p)

- The skew value (0.28) indicates a slight right skew, showing some higher exam scores.
- The kurtosis (-1.09) is less than 0, indicating it is platykurtic, much flatter than normal with very light tails and fewer extreme values.

MBA Marks (mba_p)

- The skew value (0.31) shows a slight right skew, indicating some higher MBA scores.
- The kurtosis (-0.47) is less than 0, indicating it is platykurtic, flatter than normal with lighter tails.

Salary

- The skew value (0.81) shows a strong right skew, meaning a few students receive much higher salaries.
- The kurtosis (-0.24) is less than 0, indicating it is platykurtic, slightly flatter than normal with lighter tails and fewer extreme values.
